ryegrass and tall fescue) antifreeze proteins and the polynucleotides encoding them ADM41458-ADM41483. The polynucleotides were isolated from tissues taken at different times of year (winter and spring) and from different parts of the plants. The polynucleotides can be used to modulate the cold tolerance of an organism, especially plants, mammals, insects, fungi, archaea and bacteria. The method involves incorporating an antifreeze polynucleotide, under the control of a gene promoter sequence, into the genome of the organism, or introducing double-stranded RNA corresponding to the polynucleotide into the cells of the organism, thereby inhibiting expression of an antifreeze protein can be used for the cryopreservation of a cell or tissue, as a food additive of a frozen food product, in a method for decreasing the time required to dehydrate a composition, to treat a disorder characterised by biocrystals associated with disorders such as gout and kidney stones, to preserve the viability of a molecular biology reagent, to destroy unwanted tissue in a patient e.g. tumour tissue, and

different parts of the plants. The polynucleotides can be used to modulate the cold tolerance of an organism, especially plants, mammals, insects, fungi, archaea and bacteria. The method involves incorporating an antifreeze polynucleotide, under the control of a gene promoter sequence, into the genome of the organism, or introducing double-stranded RNA corresponding to the polynucleotide into the cells of the organism, thereby inhibiting expression of an antifreeze polypeptide. The antifreeze protein can be used for the cryopreservation of a cell or tissue, as a food additive of a frozen food product, in a method for decreasing the time required to dehydrate a composition, to treat a disorder characterised by biocrystals associated with disorders such as gout and kidney stones, to preserve the viability of a molecular biology reagent, to destroy unwanted tissue in a patient e.g. tumour tissue, and to protect a plant from damage due to frost or freezing.

The invention provides forage grass (perennial ryegrass and tall fescue) antifreeze proteins and the polymucleotides encoding them ADM41488-ADM41483. The polymucleotides were isolated from tissues taken at different times of year (winter and spring) and from different parts of the plants. The polymucleotides can be used to modulate the cold archean and bacteria. The method involves incorporating an antifreeze polymucleotide, under the control of a gene promoter sequence, into the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   present sequence is that of cDNA encoding an antifreeze protein of

                to the polynuclectide into the cells of the organism, thereby inhibiting expression of an antifreeze polypeptide. The antifreeze protein can be used for the cryopreservation of a cell or tissue, as a food additive of a frozen food product, in a method for decreasing the time required to dehydrate a composition, to treat a disorder characterised by biocrystals such as sociated with disorders such as gout and kidney stones, to preserve the viability of a molecular biology reagent, to destroy unwanted tissue in a patient e.g. tumour tissue, and to protect a plant from damage due to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 832

The invention provides forage grass (perennial ryegrass and tall fescue) antifreeze proteins and the polymucleotides encoding them ADM41483-ADM41483. The polymucleotides were isolated from tissues taken at different times of year (winter and spring) and from different parts of the plants. The polymucleotides can be used to modulate the cold tolerance of an organism, especially plants, mammals, insects, fungi, archaea and bacteria. The method involves incorporating an antifreeze polymucleotide, under the control of a gene promoter sequence, into the genome of the organism, or introducing double-stranded RNA corresponding to the polymucleotide into the cells of the organism, thereby inhibiting expression of an antifreeze polypeptide. The antifreeze protein can be used for the cryopreservation of a cell or tissue, as a food additive of

The present sequence is that of cDNA encoding an antifreeze protein of tall fescue. The cDNA was isolated from a leaf blade cDNA expression library. The invention provides forage grass (perennial ryegrass and tall fescue) antifreeze proteins and the polynucleotides encoding them the polynucleotides were isolated from tissues taken and it miss of year (winter and spring) and from different parts of the plants. The polynucleotides can be used to modulate the cold to rolerance of an organism, especially plants, mammals, insects, fungi, archaea and bacteria. The method involves incorporating an antifreeze polynucleotide, under the control of a gane promoter sequence, into the genome of the organism, or introducing double-stranded RNA corresponding capression of an antifreeze polypeptide. The antifreeze protein can be used for the cryopreservation of a cell or tissue, as a food additive of the car frozen food product, in a method for decreasing the time required to dehydrate a composition, to treat a disorder characterised by biocrystals associated with disorders such as gout and kidney stones, to preserve the

The present sequence is that of cDNA encoding, an antifreeze protein of perennial ryegrass. The invention provides forage grass (perennial ryegrass and tall fescue) antifreeze proteins and the polynucleotides encoding them ADMA1458-ADM41483. The polynucleotides were isolated from tissues taken at different times of year (winter and spring) and from different parts of the plants. The polynucleotides can be used to modulate the cold tolerance of an organism, especially plants, mammals, insects, fungi, archaea and bacteria. The method involves incorporating an antifreeze polynucleotide, under the control of a gene promoter sequence, into the genome of the organism, or introducing double-stranded RNA corresponding to the polynucleotide into the cells of the organism, thereby inhibiting expression of an antifreeze polypeptide. The cryopreservation of a cell or tissue, as a food additive of a frezen food product, in a method for decreasing the time required to dehydrate a composition, to treat a disorder characterised by blocrystals associated with disorders such as gout and kidney stones, to preserve the viability of a molecular biology reagent, to destroy unwanted tissue in a patient e.g. tumour tissue, and to protect a plant from damage due to frost or freezing.

The present sequence is that of cDNA encoding AFP3, an antifreeze protein of perennial ryegrass. The cDNA was isolated from a root cDNA expression library. The invention provides forage grass (perennial ryegrass and tall fescue) antifreeze proteins and the polynucleotides encoding them to the polynucleotides were isolated from tissues taken and ifferent times of year (winter and spring) and from different parts of the plants. The polynucleotides can be used to modulate the cold colarance of an organism, especially plants, mammals, insects, fungi, archaea and bacteria. The method involves incorporating an antifreeze colynucleotide, under the control of a gene promoter sequence, into the genome of the organism, or introducing double-stranded RNA corresponding to the polynucleotide into the cells of the organism, thereby inhibiting to the polynucleotide into the cells of the organism, thereby inhibiting to the polynucleotide into the cells of the organism, thereby inhibiting to the polynucleotide into the cells of the organism, thereby inhibiting to the polynucleotide into the cell or tissue, as a food additive of a frozen food product, in a method for decreasing the time required to dehydrate a composition, to treat a disorder characterised by biocrystals associated with disorders such as gout and kidney stones, to preserve the viability of a molecular biology reagent, to destroy unwanted tissue in a patient e.g. tumour tissue, and to protect a plant from damage due to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antifreeze proteins and encoding polynucleotides, useful for modulating cold tolerance in organisms, as food additives, or for treating tumors or disorders associated with the presence of unwanted

The present sequence is that of cDNA encoding AFP4, an antifreeze protein of perennial ryegrass. The cDNA was isolated from a leaf and pseudostem cDNA expression library. The invention provides forage grass (perennial ryegrass and tall fescue) antifreeze proteins and the polymucleotides encoding them ADMA1458-ADMA1483. The polymucleotides were isolated from tissues taken at different times of year (winter and spring) and from different parts of the plants. The polymucleotides can be used to modulate the cold tolerance of an organism, especially plants, mammals, insects, fungi, archaea and bacteria. The method involves incorporating an antifreeze polymcleotide, under the control of a gene promocer sequence, into the genome of the organism, or introducing double-stranded RNA corresponding to the polymucleotide into the cells of the organism, thereby inhibiting expression of an antifreeze protein can be used for the cryopreservation of a cell or tissue, as a food additive of a frozen food product, in a method for decreasing the time required to dehydrate a composition, to treat a disorder characterised by biocrystals associated with disorders such as gout and kidney stones, to preserve the viability of a molecular biology creagent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antifreeze proteins and encoding polynucleotides, useful for modulating cold tolerance in organisms, as food additives, or for treating tumors or disorders associated with the presence of unwanted

The present sequence is that of cDNA encoding an antifreeze protein of tall fescue. The cDNA was isolated from a basal stem cDNA expression control interaction provides forage grass (peremital ryegrass and tall fescue) antifreeze proteins and the polymucleotides encoding them fescue) antifreeze proteins and the polymucleotides encoding them at different times of year (winter and spring) and from different parts of the plants. The polymucleotides can be used to modulate the cold cold cold archaea and bacteria. The method involves incorporating an antifreeze polymucleotide, under the control of a gene promoter sequence, into the genome of the organism, or introducing double-stranded RNA corresponding to the polymucleotide into the colls of the organism, thereby inhibiting to the polymucleotide into the cells of the organism, thereby inhibiting cold a natificeeze polypeptide. The antificease protein can be used for the cryopreservation of a cell or tissue, as a food additive of a frozen food product, in a method for decreasing the time required to dehydrate a composition, to treat a disorder characterised by blocrystals associated with disorders such as gout and kidney stones, to preserve the viability of a molecular biology reagent, to destroy unwanted tissue in a patient every immurated issue, and to protect a plant from damage due to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antifreeze proteins and encoding polynucleotides, useful for modulating cold tolerance in organisms, as food additives, or for treating tumors or disorders associated with the presence of unwanted

The anti-freeze protein is characterised in that at least 40% of its amino acids are from the group of series, threonine and asparagine. The anti-freeze protein can be used in frozen food products, especially frozen

confectionery. Anti-freeze proteins are especially used in food products, which are heated, e.g. by pasteurisation, blanching or sterilisation control freezing. Plants transformed with a nucleic acid sequence encoding the anti-freeze protein have an increased frost tolerance. Prior art anti-freeze proteins have not been applied to commercially available code food products, due to high costs and complicated processes for obtaining the protein. Also prior art anti-freeze proteins have tended to destabilise during processing especially during the pasteurisation step. This is overcome by the present anti-freeze protein. The anti-freeze proteins provide an ice particle size following an ice recrystalisation inhibition assay of 15 mu M or less. The anti-freeze protein ingredient can hear mixes can be frozen under quiescent conditions, e.g. in a shop or home freezer without the formation of unacceptable ice crystal shapes and hence with a texture different to products normally obtained via

                                                                          В
                                                                                                                                                                                                                                                                                                        The present sequence is that of CDNA encoding APP1, an antifreeze protein of perennial ryegrass. The CDNA was isolated from a pseudostem CDNA expression library. The invention provides forage grass (perennial ryegrass and tall fescue) antifreeze proteins and the polynucleotides controlled in the conding them ADM41458-ADM41483. The polynucleotides were isolated from tissues taken at different times of year (winter and spring) and from different parts of the plants. The polynucleotides can be used to modulate the cold tolerance of an organism, especially plants, mammals, insects, fungi archaea and bacteria. The method involves incorporating an antifreeze polynucleotide, under the control of a gene promocer sequence, into the genome of the organism, or introducing double-stranded CC RNA corresponding to the polynucleotide into the cells of the organism, thereby inhibiting expression of an antifreeze polypeptide. The cutting expression of an antifreeze polypeptide. The cutting expression of an antifreeze polypeptide of a frozen food product, in a method for decreasing the time required to dehydrate a composition, to treat a clisored sistones, to destroy unanted sistones, the dehydrate and kidney stones, to preserve the viability of anotecular biology content, to destroy unanted tissue in a patient e.g. tumour tissue, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    380 AAAAGTTTGCAGATACGGCTCAAGAGCCTCACCACTGACAGCCAGTCACTCGGTATGGGT 439

leaf—and/or stem., panicle, root—or pollen-specific or preferencial or constitutive transcription of an operatively linked nucleic acid segment. The invention also relates to a method for augmenting a plant genome and a method of identifying a gene, where its expression is altered in the seed, leaf, stem, panicle, pollen, root or is constitutive in a plant cell. The plant is a cereal, eg. soybean, alfalfa, sunflower, canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley, sorghum, rice or wheat. The polynucleotides and the polypeptides they encode are useful for manipulating crop plants to alter or improve phenotypic characteristics, to produce large quantities of oil or proteeins, to incur resistance to insecticides, viruses or fungi, and to

```
cc incur stress tolerance (e.g. salt, cold or drought) to ensure the plants cc have a high nutritional value with reduced apical dominance or dwarfism, cc early flowering or alterated metabolic pathways. This sequence represents a CC plant nucleic acid of the invention. Note: The sequence data for this CC patent did not form part of the printed specification but was obtained in CC electronic format directly from USPTO at seqdata.uspto.gov/sequence.html. XX

Sequence 4536 BP; 1102 A; 1247 C; 1221 G; 965 T; 0 U; 1 Other;

 The genomic sequence was searched against NCBI NonRedundant Protein database at RGP or DDBJ. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with blaSTR. ESTS represent the identified cDNA sequences using BlaSTN with the corresponding DDBJ accession no. and RGP clone ID. Pull-length cDNAs represent the identified cDNA sequences using BlaSTN with the corresponding DDBJ accession no. and RGP clone ID. BlaSTN with the corresponding DDBJ accession no. and RGP clone Such as seme name, 'putative.' and 'like protein.' A gene without significant homology to any protein name to indicate the homology to any protein but with full-length cDNAs represent the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by a single gene prediction program is classified as an 'unknown' protein. A gene predicted by a single gene prediction program is also classified as a miscellaneous feature of the sequence is feature of the sequence is december of the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The orientation of the sequence is from T7 to SP6 of the PAC clone. This sequence of P0585H11 clone has an overlap with B1317D11 (DDBJ. AP006186) clone at 5' end and with OJ1567 (DDBJ. AP003759) at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.ip/GenomesSeq.html.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Dilect Submission.

Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 10, 2003 this sequence version replaced gi:24819414.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.mc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome

Baylor Plaza, Houston, TX 77030, USA.

The sequence in this sequence version replaced gi:23908282.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using ARlass (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly a "contigs scaffold"). Within each contigs casffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (01 MAY-2002) Human Genome Sequencing Center, Departmen of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

* NOTE: Estimated insert size may differ from sequence length

(see http://www.ngsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs.

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* In 172927. contig of 172927 bp in length.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            172440 rarcagcacrererarararerererererererierieragearerareacacrerererererer
may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      669
